(54) COPYING SYSTEM

(57)Abstract:

PURPOSE: To take an automatic running test of the copying machine by connecting the copying machine and a centralized controller with two-way signals, and storing signals from the copying machine in the centralized controller in time series.

CONSTITUTION: The control part of the centralized controller C and an external storage device 2 are stored main data and special programs for the control, etc., of a communication circuit, and an operation part 3 displays data and controls the copying machine A. The procedure of the test is stored on a floppy unit previously or inputted on a keyboard. The copying machine A sends a count-up signal every time a copy is taken and the centralized controller C counts the total number of copies and the numbers classified by sizes. If a jam occurs, its abnormal state is displayed on a CRT1 while stored. Abnormality items are classified after the test and the trouble of the machine is improved early.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against
examiner's decision of rejection]

[Date of extinction of right]
